

Brachumera sport

The worlds highest load accurate arm ergometer

Highlights

Extreme workload range of 8 - 2500 watt

The extraordinary workload range of 8-2500 watt is unique in the world! It makes this ergometer extremely suitable for sports medicine and testing the strongest athletes in the world on their anaerobic power or isokinetic capacity.

Heavy Duty Design Arm Ergometer

The Brachumera Sport is designed for heavy duty sports medicine ergometry, without doing any concession on the esthetic, modern and robust design.

Easy to operate

For Lode products this means:

- easy to connect
- easy to move around
- easy user interface

Reliable and reproducible stress tests

The experience of professionals who calibrate many ergometers shows that the Lode ergometers are the most reliable across the complete workload and rpm range and still within specifications even after many years of intensive use.

High standards

Lode is a socially and environmentally responsible company. All Lode products are RoHS/WEE compliant and Lode is ISO 9001:2003, ISO and 13485:2008 certified. All medical products comply to MDD 93/42/EEC, incl. IEC 60601-1.

Brachumera sport

The worlds highest load accurate arm ergometer

The Brachumera sport is a modern and reliable arm ergometer that can be controlled both manually and by external equipment. Brachumera Sport is currently used in Olympic and professional sports where the muscles in the arms and shoulders play a mayor role, e.g. kayaking and swimming. The arm ergometer for sports can deliver a load up till 2500 Watt. The function of this product can be enhanced by using it in combination with our Lode Ergometry Manager software.

Features

**7
watt**

Extreme low start-up load

The extreme low start-up load of 7 watts and the adjustability in small steps of 1 watt make this ergometer perfectly suitable for many different applications. The standard control unit shows multiple ergometry parameters and you can determine your specific default setting and start-up menu.

**1
watt**

Small adjustment steps

The workload of the Lode ergometers is adjustable in steps of only 1 watt. Depending on your wishes, the test operator or the test subject can adjust the workload. The steps of 1 watt are possible in the manual mode as well as within protocols.

Designed to be sweat-proof

The housing of the ergometer is designed in such way that sweat does not have the chance to drip into the mechanical parts. This ensures a long lifetime and makes the ergometer insensitive for malfunction.

**Custom
View**

Customer specific display setting

Display settings are adjustable according to your specific requirements: each individual has its specific wishes about the parameters to be displayed. This can easily be adjusted with the Lode ergometers.

LEM compatible

This product can be used with Lode Ergometry Manager (LEM) software to manage data and to apply specific protocols when a Communication card or Network card is present

Accurate over a long period of time

The Lode ergometers are supplied with an electro-magnetic braking mechanism of Lanooy (eddy current). The biggest advantage of this braking system compared to a friction braking system is the absolute accuracy and the accuracy over time. Moreover, friction braking systems have more wearing parts.

RS232 connectivity

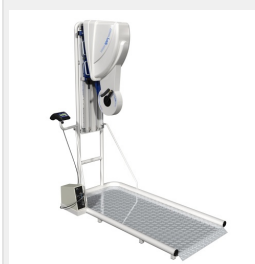

RS232 ports enable connectivity to most ECG and ergospirometry devices as well as PC's.

Brachumera sport

The worlds highest load accurate arm ergometer

Brachumera sport can a.o be extended with the following options:

The worlds highest load accurate arm ergometer

Specifications

Workload

| | |
|---|---------|
| Minimum load | 7 W |
| Maximum peak load | 2500 W |
| Isokinetic workload control | ✓ |
| Minimum load increments | 1 W |
| Maximum continuous load | 1500 W |
| Hyperbolic workload control | ✓ |
| Linear workload control | ✓ |
| Fixed torque workload control | ✓ |
| Maximum rpm independent constant load | 150 rpm |
| Minimum rpm independent constant load | 30 rpm |
| Optional heart rate controlled workload | ✓ |
| Electromagnetic "eddy current" braking system | ✓ |
| Dynamic calibration | ✓ |

Accuracy

| | |
|--------------------------------------|-----|
| Workload accuracy below 100 W | 3 W |
| Workload accuracy from 100 to 1500 W | 3 % |
| Workload accuracy over 1500 W | 5 % |

User Interface

| | |
|--------------------------------------|---|
| Readout Distance | ✓ |
| Readout RPM | ✓ |
| Readout Heartrate | ✓ |
| Readout target HR | ✓ |
| Readout Energy | ✓ |
| Readout Torque | ✓ |
| Readout Time | ✓ |
| Readout Power | ✓ |
| Set Display | ✓ |
| Set Resistance | ✓ |
| Set P-Slope | ✓ |
| Set Mode | ✓ |
| Manual operation mode | ✓ |
| Preset protocol operation mode | ✓ |
| Analog operation mode | ✓ |
| Terminal operation mode | ✓ |
| Selfdesigned protocol operation mode | ✓ |

Connectivity

| | |
|--------------------|---|
| Analog connector | ✓ |
| RS232 in connector | ✓ |
