

seca 201 & seca 203:

Two high-quality
medical products.

In the seca 201 and 203 you've found exactly the right products if you're in search of a measuring tape that is clearly a cut above the rest. Or if you're looking for a measuring tape with millimeter markings that can accurately measure to five millimeters.

seca 201:

The seca 201 is a true medical product. It's very easy to pull out the tape, which just as easily clicks back into place. Handling is extraordinarily convenient. Made of durable materials, the scale features a tape with a top measurement of 205 centimeters and its own low weight of only 55 grams.

seca 203:

The seca 203 also has an extra instrument to calculate the Waist-to-Hip Ratio (WHR). This ratio is an indirect method of determining the amount of fatty tissue in the abdomen and consequently, the

distribution of fat reserves. The high-quality scale is made of metal so that you'll be able to depend on this valuable additional function for a long time.

seca 201:
High-quality
materials for precise
functionality.

Millimeter graduation for
accurate measurements.

seca 203:
Display to determine
body fat distribution.
